

## **EcoMatting 700**

EcoMatting 700 is a biodegradable erosion control fabric made up of a single layer of continuously woven coir (coconut fiber) matting. It is designed to be used on slopes, shorelines and streamlines for erosion & sediment control. It is also designed to hold seed intact during the establishment of vegetative cover. Coir geotextiles are an environmentally friendly product.

| Property                  | Test Method | EcoMatting 700             |
|---------------------------|-------------|----------------------------|
| Weight                    | ASTM D 3776 | 20.65 oz/SY (700 g/sq.m)   |
| Tensile strength          | ASTM D 4595 |                            |
| Machine direction         |             | 1348 x 626 lbs/ft          |
| Elongation at failure Wet | ASTM D 4595 |                            |
| Machine direction         |             | 34% x 38%                  |
| Flexibility (Mg-Cm)       |             | 65030 x 25590              |
| Longevity                 |             | 4-6 years                  |
| Open area                 | Calculated  | 50%                        |
| "C" Factor                |             | 0.002                      |
| Thickness                 | ASTM D 1777 | 0.30 in                    |
| Minimum Twine Count       |             | 27 x 18                    |
| MD x CD (per foot)        |             |                            |
| Recommended slope         |             | 1:1                        |
| Flow Velocity             |             | Observed 11 fps (3.5 m/s)  |
| Shear stress              |             | 4.5 lbs/sq.ft (215 N/sq.m) |
